## Mediprocity

Mediprocity is a HIPAA compliant clinical communication and collaboration platform that helps secure patient health information and improves workflow.

Mediprocity has been working to improve clinical communication in a secure environment for over 8 years and has a deep understanding of HIPAA and HITECH compliance. Our focus is in the Long-Term Care market helping Nursing Homes, Assisted Living, Home Health, Hospice and Pharmacy. Our services were one of the first to offer secure messaging at no cost for independent prescribers and our services beat competitive pricing.

Mediprocity can be used as a stand-alone tool for users in the healthcare space and does not require a long-term contract. Services are paid per user / per month and the platform can be integrated into other software platforms and even white-labeled.

The platform offers two products – the first is secure messaging which can be accessed via the browser or mobile app. This will be used to protect patient health information (ePHI) in the cloud as an alternative to unsecured text messaging. The second product is secure forms which is a way to transform any paper form into a secure digital web page which eliminates the need for a fax.

### Benefits

Mediprocity is committed to providing simple, secure and low-cost solutions to the healthcare market.

- Add/Remove users from messages to help improve and escalate workflow
- Multiple notification settings for routine, emergent, do not disturb and SMS / Email backup
- Secure forms for patient intake, patient admissions and more to reduce need for fax
- File folder to save important attachments within the secure mobile app
- Remote wipe and full access controls of all users within your organization

### System Overview

The only thing needed to fully use with Spectralink is to be able to access the Google Play Store to download and install the Mediprocity app. Mediprocity may also be used via Chrome browser.
