TeraMessage by Canamex Communications Corporation

Use PIVOT™ by Spectralink as a Private Text Messaging Device for Instant and Secure Communications.

Benefits

- Establish a secure and private “Chat” between PIVOT and computer users.
- PIVOT users can instantly receive messages from existing Nurse Call systems, alarm monitors, machines, PLCs, etc.
- PIVOT and computer users can see who is available to receive their message.
- Users can broadcast critical messages to programmable groups.
- Message read confirmation automatically returned to sender.
- Control which users in a department can send and receive messages.
- Obtain a detailed log of all sent and received messages.

System Overview

- Install on-site the TeraMessage controller and connect it to the network.
- Activate the TeraMessage app on the PIVOT device.
- Program PIVOT and TeraChat users to determine route of messages.
- Connect other message sources to the TeraMessage Controller, if any.
