WHY MOBILE SECURITY MATTERS MORE THAN EVER

MORE IS AT RISK

- The growing reliance on mobile solutions is leaving companies vulnerable to cyber attacks.
- Researchers predict that by 2021, more than 80% of Internet traffic will be mobile.
- Insecure Wi-Fi networks and unauthorized access to corporate data are common.
- Mobile devices are 3 times more likely to be targeted by cyber threats.

MORE IS AT STAKE

- Mobile security is needed to protect your investments and promote better outcomes for digital transformation.
- Mobile is the new engine for business growth, providing a powerful foundation for innovation and growth.
- Every company using mobility solutions must consider the security implications.

MORE VULNERABILITIES AT EVERY TURN

- Network threats: Weak encryption, unsecured Wi-Fi networks, and inadequate perimeter security.
- App-based threats: Malware, phishing, and unauthorized access to corporate data.
- Web-based threats: Phishing, drive-by downloads, and malware.

WHAT MORE CAN YOU DO TO FORTIFY MOBILE DEVICE SECURITY?

- Secure your network: Ensure strong encryption, update software patches, and implement access controls.
- Complement app-based threats: Use anti-virus software, require strong password security, and enable multi-factor authentication.
- Protect web-based attacks: Implement secure connections, block malicious websites, and monitor user activity.
- Choose the right partner: Select a provider with expertise, experience, and a strong reputation.
