Spectralink Drives Mobile Workforce Productivity with the Introduction of Versity Enterprise Smartphones

Purpose-built for enterprises, Versity features best in class voice and data quality, application integration and durability with a consumer smartphone look and feel

LONDON, UK – March 7, 2018 – [Spectralink](), a leader in enterprise mobility solutions, today announced the introduction of the [Versity enterprise smartphone](). Versity empowers users with a next-generation mobility solution featuring superior voice quality, broad application integration and proven reliability in a slim, durable, lightweight device.

Enterprise mobility solutions serve as a catalyst for driving business optimization initiatives such as workforce productivity and increased customer satisfaction. According to VDC Research, smartphone deployments supporting line of business applications is expected to grow by over 9% compounded annually through 2021. Versity smartphones provide mobile workers with a powerful, intuitive communication tool that enables real-time collaboration, faster decision-making and quicker customer responses in a purpose-built device for enterprises.

"The Versity mobile solution is optimized for mission-critical healthcare, retail, manufacturing, and hospitality environments," notes Doug Werking, CEO of Spectralink. "By combining enterprise features with a modern, intuitive user experience Versity helps organizations drive productivity gains by eliminating communication bottlenecks, streamlining workflows and improving customer service."

Engineered to support today's mobile workforces with a sleek, consumer-like smartphone design and weighing just 204 grams, Versity is easily operated with one hand. It includes a 5.2-inch, high resolution display, providing workers with superior text and image clarity – even in low light conditions. Other features include:

- Unrivaled mobile call quality
- Superior wi-fi coverage, noise suppression and echo cancellation
- Available LTE option for workers on the go
- Integration with the latest call server technologies
- Google certified for access to the broadest range of applications
- Durable form factor with chemical-resistant, IP-68 rated enclosure
- Safe mode to support lone and remote workers
- Industrial barcode scanner

"We set out to design a mobility solution to address the toughest enterprise requirements without compromising style, flexibility or performance," said Andrew Duncan, vice president, product and technology solutions for Spectralink. "The result is Versity – a purpose-built solution designed to meet the rigors and requirements of today's enterprise environments while incorporating the consumer-type functionality users have come to prefer."

Versity will be available mid-summer 2018.

About Spectralink
Spectralink leads the enterprise mobility market with industry's most deployed mobility solution portfolio optimized for mission-critical healthcare, retail, manufacturing and hospitality applications. As the enterprises transition to mobile workflows, Spectralink is at the forefront of the industry transformation through its innovative end-to-end mobility portfolio. Designed for challenging RF environments, our mobile solutions enable enterprises to streamline their workflows and deliver a positive customer experience. To protect our customers' investments in UC platforms, we offer the best interoperability in the industry with the leading call control platforms. Since 1990, Spectralink has deployed millions of mobile devices worldwide – providing enterprises with the industry's most reliable, high quality and secure mobility solutions.
